Revolutionary Plant Health Solutions

Treat For Whitefly Now!

Inject your trees and palms with IMA-jet and AzaSol™

Rugose Spiraling Whitefly

Rugose Spiraling Whitefly (RSW) produces "honeydew," a sugary substance that can stick to your house, car, or patio and make a real sticky mess.

IMA-jet

- Highest performing imidacloprid product on the market
- Long term control
- Proprietary inert ingredients move products to pest feeding site quickly
- Low use rates

AzaSol™

- Botanical insect control
- Quick knockdown
- Zero day interval to harvest on food crops
- Can be trunk injected or sprayed on foliage (small plant material)

LET US TREAT YOUR TREES

Why Trunk Injection?

Your trees add tremendous value to your home. Insects could be damaging your valuable trees and palms. Trunk injection protects your trees now and into next season.

What Products Do You Use?

We recommend treatment with IMA-jet, a quick-acting and long-lasting product regarded as the leader in Whitefly control. For food-bearing trees including coconut palms, we recommend AzaSol, a botanical broad-spectrum product derived from neem.

How to Qualify a Service Provider:

- Is the service provider Arborjet trained?
- If Arborjet trained...where were they trained?
- What product will they be using? (should respond with IMA-jet)
- Can I have a copy of the label of the product you will be using? (The Service Provider needs to have copies of label and MSDS available upon request.)
- How much product will be applied to each tree/palm?
- Can I watch the injection procedure?
- What should I expect after treatment?
